# A GARDEN *of* EVERGREENS

EVERGREEN TREES are the true symbols of life—in winter their green foliage is a continual reminder of summer; and in the summer their wonderful shade and fragrance add charm to any out-door living room.

Your garden is your out-door living room. Decorate it—at a cost so small you'll never miss it. The additional beauty cannot be measured in dollars and cents—nor the pleasure and comfort of watching living Evergreen Trees grow year after year.

WESTERN MAINE FOREST NURSERY  
FRYEBURG, MAINE

# Western Maine Forest Nursery Trees

are the finest trees that can be grown. Every tree offered in this price list has been transplanted every two years. Frequent transplanting produces a strong, well balanced top and root growth—a tree that will live.

## THE ADVANTAGE OF MAINE GROWN TREES

Maine-grown trees are hardy. Grown in this rigorous climate at the very foot of the White Mountains, these trees have already withstood the severest tests of nature—temperatures of 50 below zero in the winter and over 100 above zero in the summer. Weak trees cannot stand such a climate. It's a case of the survival of the fittest—you get only the strongest trees.

## SPECIAL PREPAID OFFERS OF TRANSPLANTED TREES

NO. 1	NO. 2	NO. 3	NO. 4

*\*White Pine may be shipped into all states (and the District of Columbia) except Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming.*

Orders will be shipped C. O. D. providing a payment of half the amount accompanies the order.

50 trees of the same kind and size may be bought at the 100 rate.

All prices are F. O. B. Fryeburg, Maine, EXCEPT our special prepaid offers.

**On back of this sheet are names of friends or neighbors who would be interested in receiving your price list.**

# How to Plant Evergreens

To plant these small trees, use a trowel or shovel and make a hole large enough to accommodate the roots when they are well spread out. Put a little water in the hole, pack the earth around the roots, keeping them well spread. When the hole is filled, pack the earth down firmly so that no air can get to the roots to dry them out. Be very careful between the time you receive the trees and the time you plant them not to let the roots dry out. Dry roots are always fatal to an evergreen. If you are planting the trees in your garden to let them grow a few years before putting them in their permanent locations, keep them about a foot apart. If you are not ready to put them in their permanent locations at the end of two years, be sure to transplant them again, placing them two feet apart.

## SHIPPING WEIGHT

(Approximate)

Trees averaging less than 10 inches  
—10 lbs. per 100 Trees.

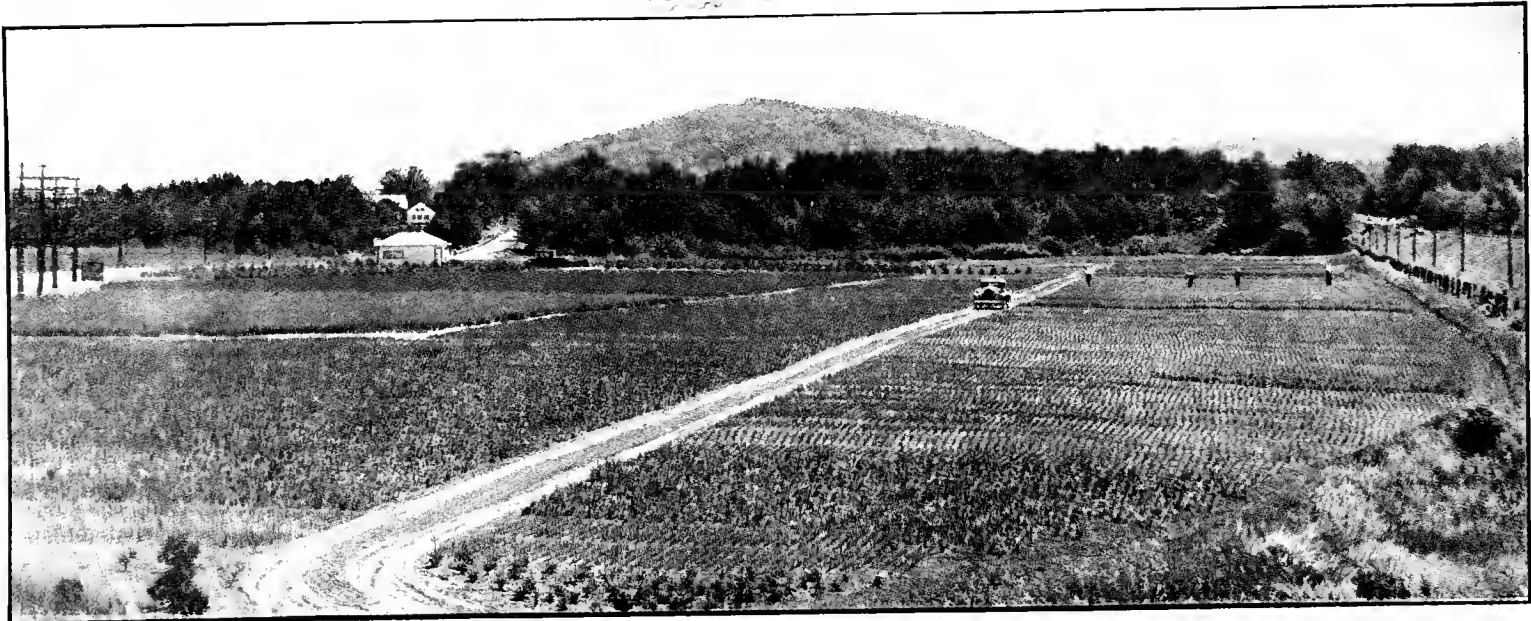

Trees averaging 8 to 12 inches  
—15 lbs. per 100 Trees.

Trees averaging 10 to 15 inches—  
18 lbs. per 100 Trees.

## Questions — *and* — Answers

- How large is your nursery?* Thirty-five acres of trees—about five million in all. Annual output, about one million trees.
- How are the trees packed?* The roots are packed in wet moss and the whole tree wrapped in burlap and waterproof paper. There is no charge for packing.
- How are they shipped?* Either by express or parcel post. However, express shipment is recommended. Express shipments go collect and parcel post shipments C. O. D. for postage EXCEPT in the case of our special Prosperity Offer on which we prepay the carrying charges.
- How long will the trees keep in the package?* Two or three weeks if necessary and if kept in a damp place, but of course the sooner they are unpacked the better.
- Do the trees have to be transplanted after we plant them?* No, not if they are planted in their permanent locations. Many of our customers put their trees in a garden or other cleared area for a few years, then transplant them to their permanent locations. When you do transplant, cut around each tree with a shovel and lift out with a good ball of earth.
- Is mulching necessary?* Mulching, or the putting of peat moss, leaves, hay, straw or other similar substance on the ground around the tree, is not necessary but helps keep the moisture in the soil during dry seasons and also protects the tree from the effects of frost heaving in the spring and fall.
- Should the trees be shaded?* Not under average conditions. However, some of our customers in the far south have told us that better results are obtained if the trees are shaded during the hot summers.
- Should we use a fertilizer?* Not necessary, but a good fertilizer will stimulate growth. Use Vigoro, Loma or any other good tree food.
- Are trees which have been transplanted each two years better than those which have not?* Yes. Trees which are not transplanted at least every two years put on a tall, spindling growth which is weak. The roots are poorly developed, usually one long tap root with very few laterals. First class trees are transplanted at least every two years. Those that have not been so transplanted are usually not worth planting.
- What trees should we plant for a hedge?* For a low hedge—less than four feet—use Arborvitae or Hemlock. Do not use mixed varieties in planting hedges. For high hedges or windbreaks, use any of the Pines, Spruces or Firs.
- Do you guarantee delivery?* Yes. If you do not receive your trees within a reasonable time after receiving notice of shipment, write us at once and we will send you duplicate shipment and collect from the express company for loss of your trees.
